

Auto finance Strategy

Focus on repossession

July 2025

Executive summary

xx Focus of today

- A Over the past 5 years, the **retail used car market** has grown at a **5% CAGR**, supported by a **favorable macroeconomic context** (e.g., +9% CAGR in GDP, -12% CAGR in unemployment rate, -20% CAGR in NPL stock)
- B In this context, **Eurobank** bad rates improved from 5.6% to 2.6%, but the Bank experienced a **decline in loan applications** (-15%) and lost **10 p.p. of market share** (from 25% to 15%) in their independent dealers' channel, mainly due to:
 - **Intensified competition:**
 - **systemic banks** are making a **renewed push into used car financing**, offering **attractive dealer terms** (e.g., +3–4 p.p. higher commissions), superior service levels (SLAs) and booking rates (e.g., 60-80% based on dealers' interviews)
 - **specialized auto finance players** are replicating in Greece **successful European strategies** through **product innovation** and **B2B financing**
 - **Decline in booking rate** (from 46% to 37%), leading in a gradual **contraction** of Eurobank share of wallet in their **dealer network**
- C To **fight back competition**, Eurobank should adopt **international best practices**, notably **developing repossession capabilities**:
 - i **move into secured lending**, enhancing booking rate (i.e., reduce rejections and counteroffers)
 - ii **offer collateralized B2B financing**, with wholesale volumes and terms tied to retail loan disbursements (e.g., B2B volumes cap. at ~70% retail loan disbursements)
 - iii **expand balloon financing to used cars**, with **no mandatory downpayment** and lower rates vs. traditional auto loans, supported by **dealers' buy-back agreements** for cars <9 years at repayment
- D Beyond these initiatives, Eurobank should enter the **leasing market organically**, developing asset management **capabilities** (synergetic with repossession)
- E The overall transformation could allow Eurobank to **double its market share** (from ~15% to ~30%) in the **auto finance retail market**, generating **+25-35M€ PBT in 2030** (x3 vs. today), with **~4-6M€ in IT investments**

A | In 2021-24, the retail used car market has grown at a 5% CAGR, supported by a favorable macroeconomic context

Preliminary

Greek macro-economic context

Retail² used car market via dealers' channel (k#)³

— Greek nominal GDP, B€¹ — NPL stock, B€ — Unemployment rate, %

2021-24 CAGR

2021-24 CAGR

1. Computed considering average annual EUR/USD rates: 1.19 in 2021; 1.16 in 2022; 1.11 in 2023; 1.09 in 2024
2. Individuals, freelancers, personal companies
3. Assumptions: 90% of used car sales occur in the retail market, with 50% sold through dealer channels (B2C); financing penetration is assumed constant at 35%

A | Greek retail auto financing lags behind European G5, with no secured lending and ~80% of transactions still paid in cash

■ Loan financing¹ ■ Leasing ■ Subscription ■ Cash

Penetration rate for passenger cars in Europe in 2023 (Greece in 2024) by financing product, %

1. For Eurobank, it includes also cash loan used for Auto ; 2. Individuals, freelancers, personal companies
Source: Internal McKinsey model

B | In a growing market, Eurobank experienced a decline in auto loan applications and booking rate, leading to ~10p.p. drop in MS

Evolution of Eurobank used auto loan applications (k#) and booking rate (%)

B | The declining volumes and booking rates are driven by varying dynamics across different car ages

Preliminary

xx Avg. downpayment, % Rejected Counteroffer & Cancelled Approved Disbursed

Key remarks

Decline in **application volumes** (-20%), despite **improved booking rate** (+5 p.p.), likely driven by stronger competition (e.g., +3-4 p.p. higher dealers' commissions, better SLAs, B2B financing tied to retail volumes)

Stable application volumes but **declining booking rate** (-5 p.p.), driven by **higher counter-offer cancellations** and **rejections** (+8 p.p.) – *likely linked to new policy changes*

Significant drop of booking rate (-19 p.p.), driven mainly by **increase in rejections for cars >12 years** at repayment

1. Booking rate excludes applications cancelled by client, before Eurobank decision

C | Repossession is the key enabler to fight back competition and restore Eurobank historic market share in the used car business

Non-exhaustive

 Detailed next

Potential initiatives for used cars

i

Move into retail auto secured lending to enhance booking rate
(i.e., reduce rejections and counteroffers)

ii

Offer collateralized B2B financing (e.g., stock finance, floor plan)
with wholesale volumes and terms tied to retail loan disbursements

iii

Extend **ballon financing** to **used cars**, with **no mandatory downpayment** and lower rates vs. traditional auto loans, supported by **dealers' buy-back agreements**

Repossession is the key enabler to adapt credit rules, as the ability to collateralize the vehicle offsets the higher risk

C | Critical success factors and KPIs for establishing repossession capabilities

Key success factors of repossession

Robust legal & contractual framework: ensure lending contracts clearly define repossession rights, customer consent, and legal enforceability, aligned with Greek regulations for consumer protection and recovery jurisdiction

Efficient operations & field execution: establish streamlined, SLA-driven processes supported by centralized PMO oversight and leverage technology (e.g., GPS tracking for owned cars, digital task management tools) to coordinate field operations, reduce delays, and enhance reliability

Diversified remarketing strategy: develop multichannel remarketing strategy (e.g., dealer networks, digital auctions, Car.gr sales) for flexibility in asset disposition and maximization of recovery value

Strategic network of preferred partners: establish a preferred network of dealers or remarketing partners to negotiate pre-sale agreements and reduce time-to-market

Continuous performance monitoring: regularly monitor key metrics (e.g., recovery success, time-to-resale) and operational costs to inform operational adjustments

KPIs for business case success

C | Business case example for used cars: repossession key enabler to adapt credit rules

Evolution of 2024 cost of risk for used cars, %

Business case example for used cars

C | Large European banks have already established successful repossession strategies through in-house development

Detailed in backup

Example of players

Description of repossession strategy

Traditional banks

- Société Générale handles **vehicle repossession** through its **(100% owned) recovery subsidiary Concilian**
- **Concilian** oversees the **entire repossession lifecycle**, leveraging external partners for selected activities (e.g., remarketing)
- Concilian provides collection services (incl. repossession) also to other financial institutions

- Crédit Agricole manages **internally vehicle repossession** within the collection team, leveraging external partners for selected activities (e.g., remarketing, asset recovery)

- Santander implements a standard **repossession process** through its **consumer finance arm (SCF)**. The bank manages legal notifications in-house, while outsources **physical asset recovery to third-party agents**

New entrants

FINN

*German market leader
for car subscription*

- FINN manages **repossession in-house**, integrating a **best-in-class, tech-enabled remarketing process**. The company has developed a **digital partner portal** for **real-time access to vehicles**, leveraging AI and machine learning to automate invoices and is deploying **AI agents** to identify **high-potential B2B partners**, enabling scalable and targeted outreach for remarketing vehicles

C | Potential repossession journey for Eurobank leveraging external partners

 Detailed next

C | Eurobank can leverage a diversified remarketing strategy for flexibility in asset disposition and maximization of recovery value

Expected number of retail cars repossessed, #

Remarketing strategy

Pillar	Option	Description/ best fit for
1. Refurbishment & reconditioning	Basic preparation	Standard cleaning and light cosmetic fixes to improve appearance and perceived value
	Standard packages	Tiered reconditioning packages aligned to vehicle type and resale channel (e.g., auction vs. Car.gr)
	Value driven repairs	Selective refurbishment only for cars with possibility to significantly increases resale value
2. Pricing	Inspection-based pricing	Pricing based on independent inspection by third-party or de-fleeting company , adjusted to remarketing channel (e.g., preferential discount to selected dealers)
	Dynamic market-based pricing	Real-time dynamic pricing powered by automated tools (e.g., based on demand trends, vehicle condition, remarketing channel historical performance)
3. Channel strategy	Dealers' network	Pre-arranged resale to preferred partners (e.g., dealers network) for most vehicles in good conditions ● Preferred option
	Digital marketplaces	Online platforms (e.g., Car.gr) for direct retail reach for newer vehicles not requiring dealers' repairs
	Wholesale auctions	Rapid liquidation of low-demand or unsold aged vehicles from retail and dealer channels
	Export market	Cross-border marketplaces or international wholesale buyers , especially for EVs or vehicles unsuitable for domestic resale
4. After sales	After sales support	After sales support for claims management (B2C and B2B), potentially supported by digital portals and self-service tools (B2B)

Next steps

- Present overall **Auto finance transformation strategy** to the **Group CEO**
- Organize **ExBo** for **strategy validation**
- Launch **transformation execution**

Appendix

Appendix

- 1 Methodology and assumptions on repossession business case
- 2 Example of FINN remarketing business model
- 3 Deep-dive on initiatives in the used car business

1 | Approach and output for secure lending retail business case

Approach

- a. Estimate **expected number of delinquencies** in ERB retail cars financed portfolio in **2030** (i.e., **bad rates**) and **expected number of cars repossessed** by ERB
- b. Define **repossession costs** for each product (i.e., loan, leasing) based on:
 - **Fixed fees** for **legal repossession**, **asset recovery**, **storage** and **inspection**
 - **Variable fees** for **remarketing** the car through **dealer** or **marketplace**
- c. Estimate **RV ratio at repossession** based on:
 - **Forecasted depreciation vs. market price**
 - **Time at default and time to repossess**
 - **Repossession costs and repossession penetration**
- d. Derive the **new cost of risk** incorporating **RV ratio at repossession** and **cost of repossession**

Output

RAR growth on auto loan and leasing, driven by improved cost of risk for new cars and used cars

1 | Repossession costs incurred by ERB in journey leveraging external partners

Step	 Legal repossession	 Asset recovery	 Storage	 Inspection	 Remarketing
Description	After default notices are issued, lender gains legal right to repossess the vehicle and repossession agents proceed with recovery	Vehicle is located , secured and retrieved , and then transported to the storage facility preferred by the lender	Vehicle custody is documented (e.g., condition, date of arrival) and is stored in a gated, monitored area within storage facility	Vehicle goes through inspection (incl. interior, exterior, engine, tires) for wear, damage, missing parts and market value is estimated by inspector	Vehicle is prepared for remarketing (e.g., cleaning, minor repairs) and routed to dealership network or marketplace for resale
Cost incurred by ERB	~200-350€ per car for leasing (~1,000€ for loan) ▼ Leasing ~50-150€: bailiff fee to send extra-judicial notice to client ~100-150€: administrative fee to issue embezzlement ~50€: fee to waive embezzlement upon recovery Loan ~1,000€: expected cost for court hearing	~150-300€ per car ▼ Fixed fee pre-negotiated with repossession agent depending on car location (e.g., within or outside Attica)	~50-70€ per car ▼ ~20k-25k€: typical price range for renting an outdoor lot within Attica with fencing and surveillance for ~50-70 cars, assuming cars are stored for ~60-90 days	~150-200€ per car ▼ Fixed fee pre-negotiated with de-fleeting company depending for inspection and market value estimation	~2-8% of resale value ▼ ~2% through marketplace resale ~8% through dealer network resale (B2B)
FTE requirements	~1FTE for PMO	~0.5FTEs for SLA steering	-	-	~0.5FTEs for building remarketing strategy

1 | Number of expected delinquencies and number of cars repossessed by ERB

Overview of cars financed in ERB portfolio in 2024 (loan portfolio), #

Considering an average default time of 2 years after contract initiation and 2 years of fleet that can default

Heavily damaged and very old used cars, typically >12 years old at contract repayment

1. RV ratio is defined as RV at repossession divided by car initial market price

1 | RV ratio at repossession, incl. repossession costs and time to repossess

Car type	Car age at repayment	Product	Repossession penetration	Time at default	Time to repossess	Time of repossession	RV ratio (retail)	RV ratio (dealer)	RV ratio (net of costs)
New cars	<= 4	Loan	85%	Year 2	~10 months	Year 3	~71%	~67%	~52%
New cars	<= 4	Leasing	100%	Year 2	~3 months	Year 2	~79%	~ 75%	~73%
Used cars	<=9	Loan	85%	Year 5	~10 months	Year 6	~52%	~49%	~37%
Used cars	<=9	Leasing	100%	Year 5	~3 months	Year 5	~57%	~54%	~52%
Used cars	9-12	Loan	85%	Year 8	~10 months	Year 9	~40%	~38%	~27%
Used cars	>12	Loan	80%	Year 11	~10 months	Year 12	~30%	~28%	~19%

Considering an average car market value of ~30,000€ and an average default time of 2 years after contract initiation

2 | Case example: FINN's Remarketing excellence is built upon 5 key elements

Deep-dives on following slides

xx Deep-dives on following slides

1 Finn Partner Portal

2. Pricing intelligence

Continuous dynamic validation of sales prices by leveraging multiple external data sources and our own sales platform.

3 Europe-wide partner network

Over 800 partners in 13 EU countries are the foundation of our Remarketing network.

4 Singular bid review

Unlike auctions, each deal is negotiated individually with our partners to derive the best prices.

5. After Sales Excellence

Self-service portal with digital inventory, independent allocation to own outlets, logistics and claims reporting, among others.

Best-in-class customer experience and operational excellence across all touchpoints

2 | Case example: The FINN Partner Portal tool digitizes the entire Remarketing process

1. Partner Portal

Offers page: Overview of immediately and soon available vehicles with possibility to submit offers on individual cars or packages

Pre-sales page: Shows various models that are available for pre-sales deals, some of them even configurable

My Cars page: Overview of purchased vehicles and payment history/forecast as well as access to key documents and self-service tools

API integration: Allows partners to utilize car details, inventory, and invoicing data by incorporating our APIs into their systems

The screenshot displays the FINN Partners portal interface, divided into two main sections: the Offers page (top) and the Pre-Sale page (bottom).

Offers Page:

- Navigation:** Offers, My Cars, Pre-Sales, External/Offline status, Select a partner, Bid Review, Language, and user profile (Tim Flaschel).
- Offers List:** A table showing 220 cars with filters and sorting options. The table includes columns for Model, Variant, Availability, Registration, KM, Price Net, and Bids.
- Left Sidebar:** Includes buttons for Accept Bids, New Order (0), and Cancel Offers (0). It also has sections for Sorting, VIN Search, Brands, Models, Fuel, and Availability.
- User Profile:** Ahmet Kara, +49 151 2504 3395, ahmet.kara@finn.com.

Pre-Sale Page:

- Navigation:** Offers, My Cars, Pre-Sales, External/Offline status, Select a partner, Bid Review, Language, and user profile (Tim Flaschel).
- Pre-Sale Section:** What is a Pre-Sale? (info icon). A list of models: Audi Q2, Skoda, Seat / Cupra (selected), Audi, and VW.
- Seat / Cupra Information:** Exclusively in the pre-sale: Draw brand new Seat and Cupra models! Discover the dynamic Cupra Formentor, the sporty Cupra and Seat Leon - both as a saloon and a sports tourer - as well as the powerful Cupra and Seat Ateca. The range is rounded off by the compact Seat Arona and Ibiza models as well as innovative new models such as the Cupra Tavascan, Cupra Born and Cupra Terramar.
- Models Available:** A table showing available models with their engine type, line, MSRP net, configuration, offer price (% of MSRP), volume (#), and residual value (%).
- Highlights:** Configurations, Fully configurable, Holding Period in Subscription (12 months), Delivery to Dealer (Q2 2026), Contracted Dealer-Sourced Procurement Available.
- User Profile:** Ahmet Kara, +49 151 2504 3395, ahmet.kara@finn.com.

2 | Case example: FINN pre-sells vehicles all across Europe to maximize profitability

3. Europe-wide Partner Network¹

Overall track record

- Over 2,400 signed deals
- Total sales volume of around €1bn
- 500-1,000 – monthly sales in 2024

~32k – Total FINN Remarketing volume

Partners

- Over 800 partners in 13 EU countries
- Over 1mn units sold by partner network, indicating huge growth potential for FINN to increase Remarketing volume

Top 100 largest dealers in Germany by # of used car sales within FINN partner network

Partner footprint¹

2 | Case example: How FINN manages to achieve the best possible sales prices

4. Singular Bid Review

Individual deal negotiation: Each deal is negotiated one-on-one with partners, not via auctions - average deal size 13 cars

Systematic price control: Every bid is reviewed to ensure pricing consistency and maximize sales prices

Review process: FINN's Remarketing team and pricing experts analyze 100+ bids per day

3 | Key initiatives for used cars

Non-exhaustive

Potential initiatives for used cars

i

Move into retail auto secured lending to enhance booking rate
(i.e., reduce rejections and counteroffers)

ii

Offer collateralized B2B financing (e.g., stock finance, floor plan)
with wholesale volumes and terms tied to retail loan disbursements

iii

Extend **ballon financing** to **used cars**, with **no mandatory downpayment** and lower rates vs. traditional auto loans, supported by **dealers' buy-back agreements**

Repossession is the key enabler to adapt credit rules, as the ability to collateralize the vehicle offsets the higher risk

3ii | In Europe, autofinance players leverage B2B financing, linking dealer terms to retail volumes to enhance their position

Non-exhaustive

For discussion

Key characteristics	Floor plan	Stock finance
Purpose	Finance new inventory purchases from an OEM or importer	Finance a dealer's existing vehicle inventory
Structure	Revolving credit line tied to each vehicle purchase	Revolving credit based on current stock value
Vehicle ownership	Dealer	Dealer
Target vehicles	New vehicles	Used vehicles
Actors involved	OEM/Importer, Bank, Dealer	Bank, Dealer
Securitization	Secured lending backed by dealers' new inventory Tiered guarantee framework based on dealer risk profile: - OEM guarantee (optional) - personal guarantees (where applicable) Optional securitization of retail loan receivables to manage dealer exposure	Secured lending backed by dealers' used inventory Tiered guarantee framework based on dealer risk profile: - personal guarantees (where applicable) - optional floating insurance, encouraged for higher-risk profiles Optional securitization of retail loan receivables to manage dealer exposure
B2B financing terms linked to retail performance	Volume cap: typically capped at 50–70% of retail loan disbursement volumes (higher cap in case of OEM guarantee) Pricing: tiered interest rates tied to i) new vehicle loan origination ii) dealer risk scoring	Volume cap: stock finance exposure typically linked to 50–70% of retail loan disbursement, especially for used vehicle loans Pricing: tiered interest rates tied to i) used vehicle loan origination ii) dealer risk scoring

Example of key players

3ii | To unlock the B2B opportunity by 2030, Eurobank needs to rethink its strategy across 3 pillars

	Pillar	Objective	Initiatives
	Product & Commercial	Enhance B2B financing portfolio for dealers and RACs and link B2B commercial terms with ERB SoW in retail financing	- Enhance new floor plan product structure (e.g., introduce monthly interest payments and interest-free period) for new inventory - Relaunch stock finance, targeting used auto dealerships, and leverage importer certified used car programs (e.g., Toyota Approved) - Link B2B financing terms with Eurobank SoW in retail financing, to protect and increase penetration in the retail business Launch ballon financing with buy-back options for RACs
	Systems and processes	Offer a digital platform to streamline dealer and RAC onboarding, servicing and inventory monitoring	- Enhance digital platform for dealers and RACs to streamline credit origination and disbursement (e.g., dealer onboarding, disbursal, repayment tracking, error handling) - Integrate the platform with dealer management systems (DMS) for real-time visibility on inventory (incl. COC¹) and repayment tracking, incl. monitoring of receivables pledged as collateral
	Risk appetite	Evolve credit models to support more flexible underwriting and broaden market reach , leveraging vehicle repossession to mitigate risk	- Move to secured B2B lending and review credit models and policies incorporate vehicle RV in credit assessments - Implement tiered credit framework to differentiate B2B financing terms (e.g., amount, pricing) based on dealer risk profile and available risk mitigants (e.g., OEM guarantee) – e.g., light collateral, faster approval and better pricing for top-tier clients, progressive credit exposure increase for new entrants
Key enable for secure lending is developing repossession capabilities			

3iii | Eurobank can further strengthen its position in the “younger” used car segment, by launching balloon financing

Preliminary

Key changes vs. current offer

Key guidelines on balloon financing evolution

- Extension of **balloon financing to used cars**
- **No down payment required**, aligning with established practices in other markets
- **Revised credit policy** (e.g., vehicle as **collateral** via dealers' **buy-back agreements**, customer **DTI** **excluding balloon payment**)

Key characteristics

Current offering

Target cars	New cars
Downpayment	Minimum 15%
Dealer coverage	Toyota and Mercedes Benz dealers
End-of-term options	• Balloon repayment • Refinancing • Return the car via the dealer buy-back agreement
Credit policy	• Car buyback agreement not recognized as collateral • Customer DTI assessed based on full car value
Pricing	Similar to auto loans (e.g., ~8% + 0.6% interest for new cars)

Potential target offering

- ★ New and used cars
- ★ No downpayment
- ★ Potentially extend to additional dealers
- Same options maintained, also for used cars
- ★ Car considered as collateral via dealer buyback agreement
- ★ Customer DTI assessed excluding balloon payment
- ★ Lower than auto loans, leveraging dealer-backed collateral to reduce CoR

Expected value drivers

- Impact expected on **cars below 9 years at repayment**, supported by dealer buy-back agreements
- **Key value drivers** include:
 - **decrease in rejections**, driven by lower monthly installments that improved DTI ratios
 - **Higher number of financing applications**, enabled by the removal of down payment requirements

3 | +6-8 €M RAR by 2030 thanks to enhanced booking rate and repossession capabilities

2024-30 incremental¹ RAR evolution, €M

Strategic growth Neutral return Value erosion **xx** EBR MS,% ★ ERB current position (2024)

CoR would need to **increase 5x** for the **incremental business growth** to become unprofitable for Eurobank

- Eurobank 2024-30 journey

1 Introducing **AA models** to ERB customers and launching **balloon financing**

45%
- 2 Reviewing ERB risk appetite to **reduce rejections** to ~20% and achieve **30% MS**

~60%
- 3 Establishing **secure lending** to mitigate risk, while capturing **30% MS**

~60%

1. Incremental vs. ~4 M€ RAR generated in 2024 in the used car business, corresponding to ~30 M€ disbursements and ~3000 cars financed
